Assessment Task – Portfolio and Observation task

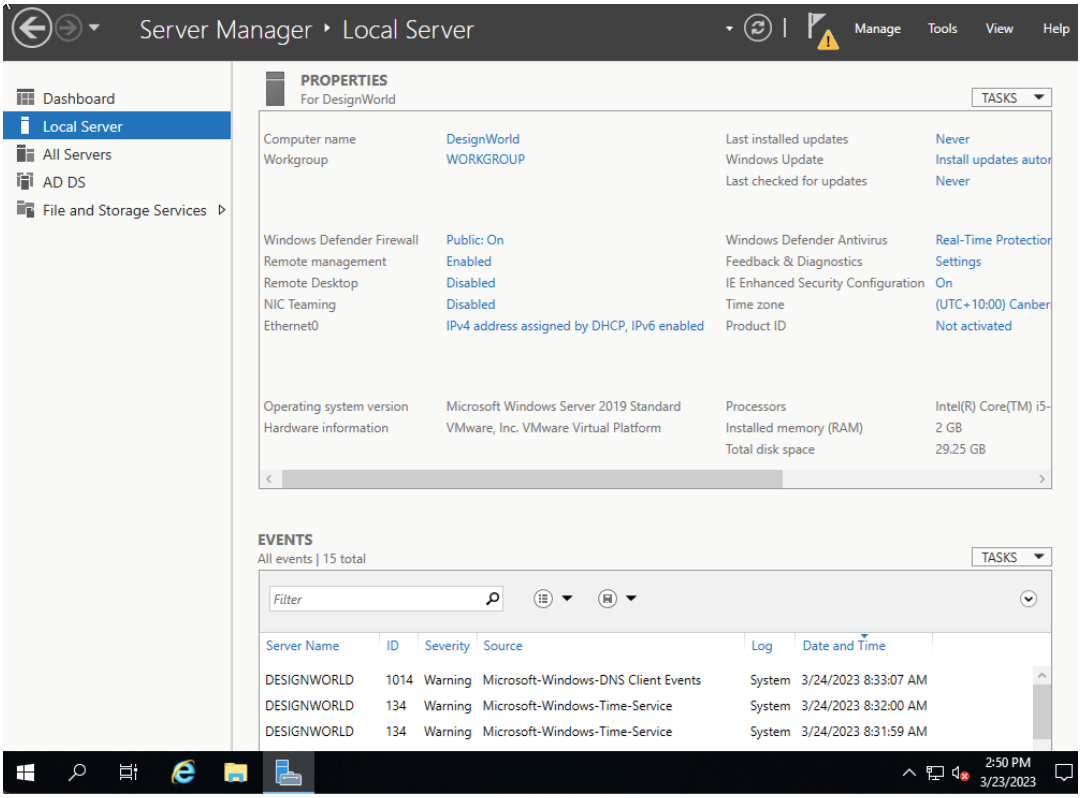

Assessment Task 2: Install and Manage Servers

Learner Version

1.Install and configure the server operating system with the following specifications:

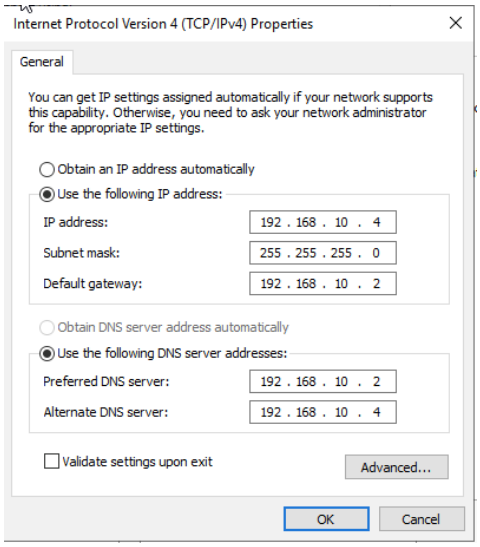

a. Install and configure the server as a primary domain controller.
b. Install AD and DHCP roles.
c. Configure the server as a DHCP server with at least 10 reserved IP addresses specified in the exclusion range.

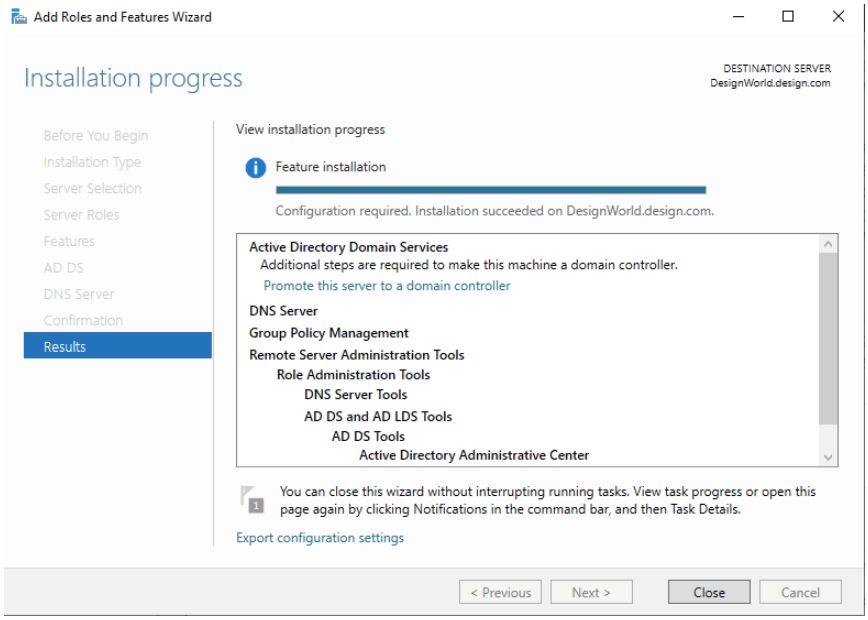

Assessment Task – Portfolio and Observation task

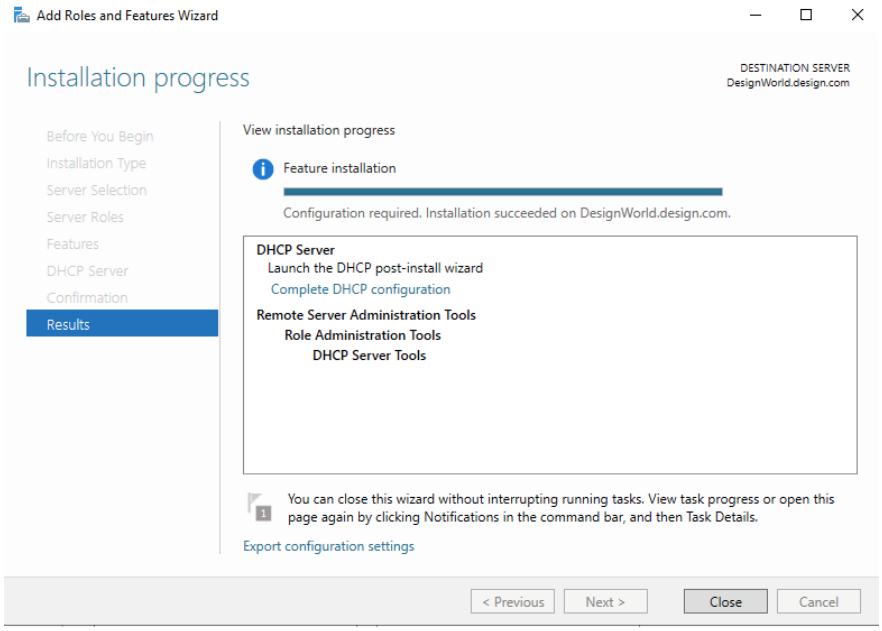

Assessment Task 2: Install and Manage Servers

2.Set up the Windows desktop client IP address to be 192.168.10.20 with the subnet mask 255.255.255.0.

3.Set the default gateway as 192.168.10.2 with the subnet mask 255.255.255.0.

4.Connect the workstation to the domain and test for connectivity.

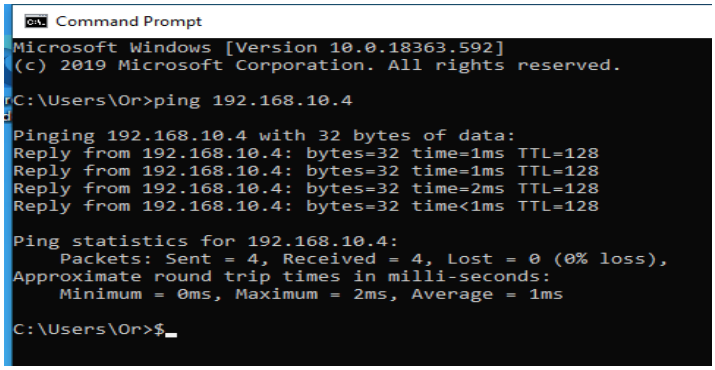

Ping from the server to the client:

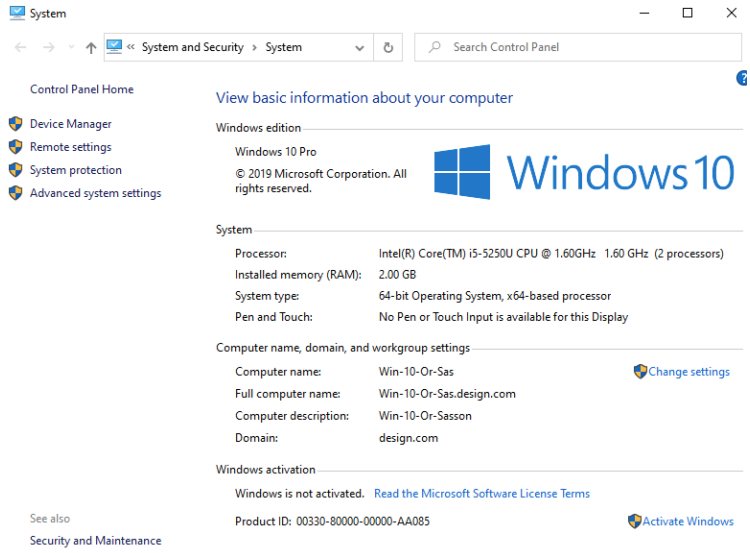

Ping from the client to the server:

Assessment Task – Portfolio and Observation task

Assessment Task 2: Install and Manage Servers

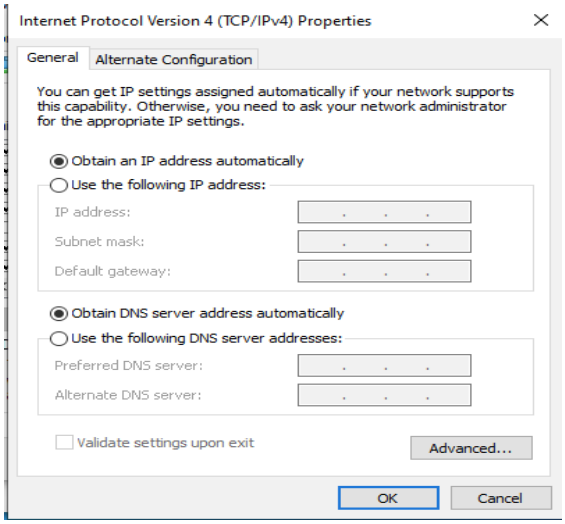

connecting dynamic Ip with DHCP:

Assessment Task – Portfolio and Observation task

Assessment Task 2: Install and Manage Servers

Got the Ip address between the DHCO range I gave

```
C:\Users\Or>ipconfig

Windows IP Configuration

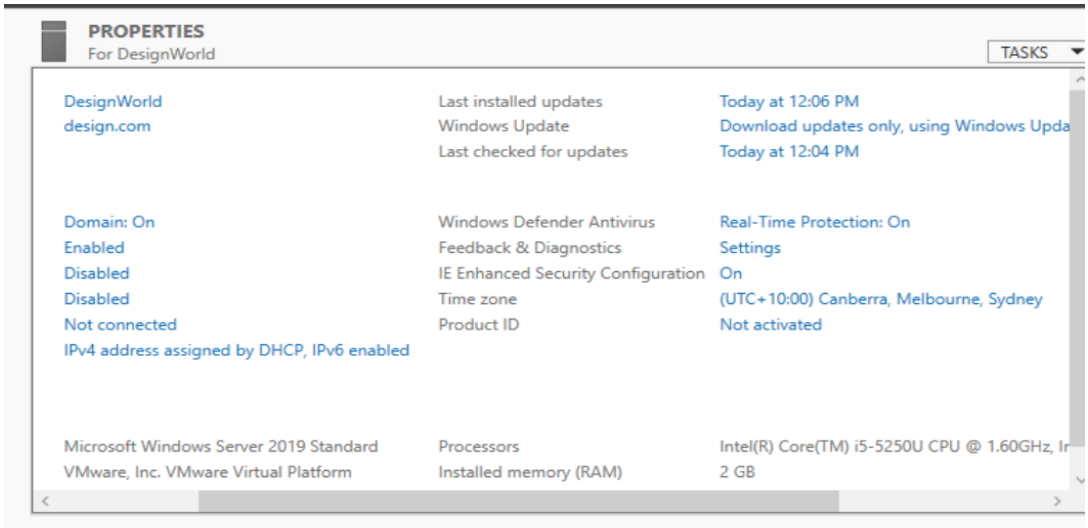

Ethernet adapter Ethernet0:

   Connection-specific DNS Suffix  . : design.com
   Link-local IPv6 Address . . . . . : fe80::bca0:f9ac:36d3:c001%2
   IPv4 Address. . . . . . . . . . . : 192.168.10.21
   Subnet Mask . . . . . . . . . . . : 255.255.255.0
   Default Gateway . . . . . . . . . : 192.168.10.2

Ethernet adapter Bluetooth Network Connection:

   Media State . . . . . . . . . . . : Media disconnected
   Connection-specific DNS Suffix  . :
```

5.Check for and if necessary, install any security patches or system updates to the Windows Server environment.

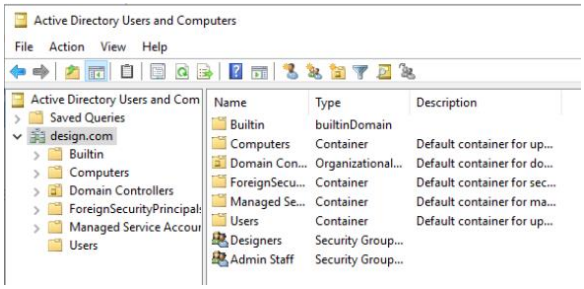

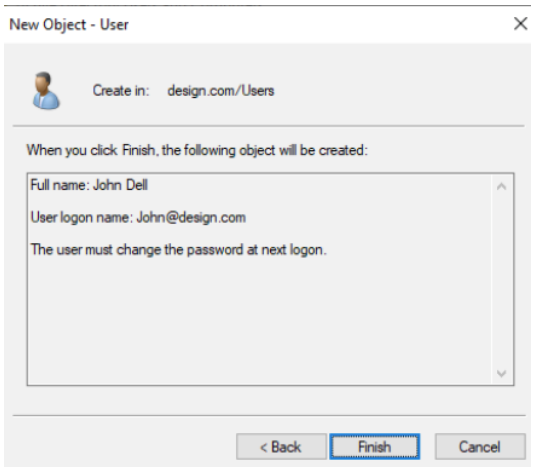

6.Using the server you created in above perform the following tasks.

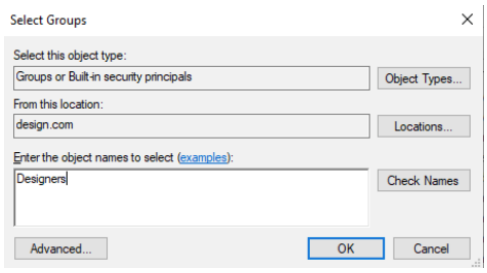

Assessment Task – Portfolio and Observation task

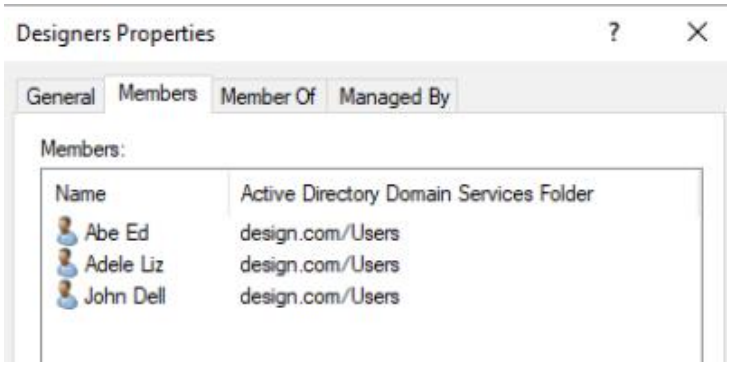

Assessment Task 2: Install and Manage Servers

a. Create two user groups. One called “Designers” and one called “Admin Staff”.
b. Create three user accounts. Three users in the “Designers” group and three users in the “Admin Staff” group.
c. Test that the users can access the network from a workstation.

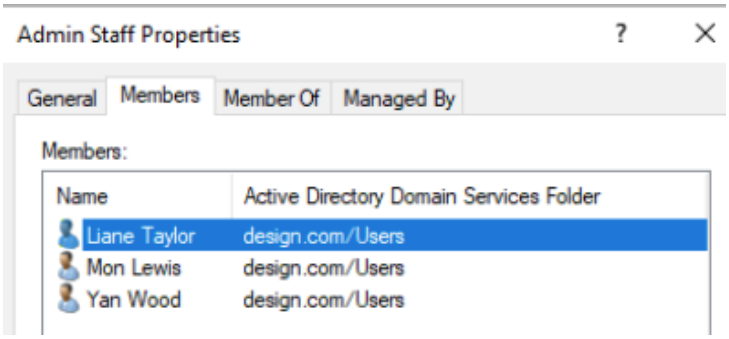

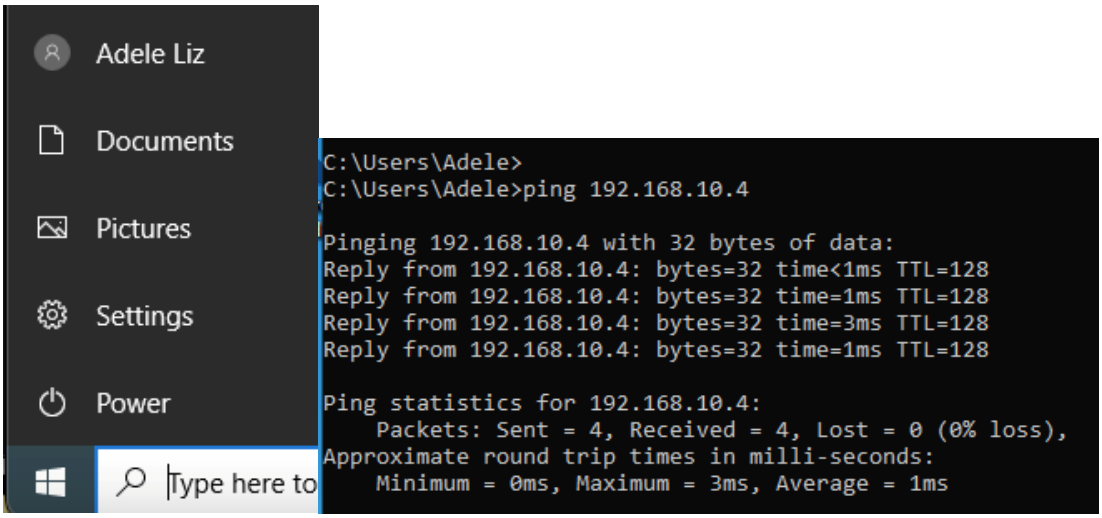

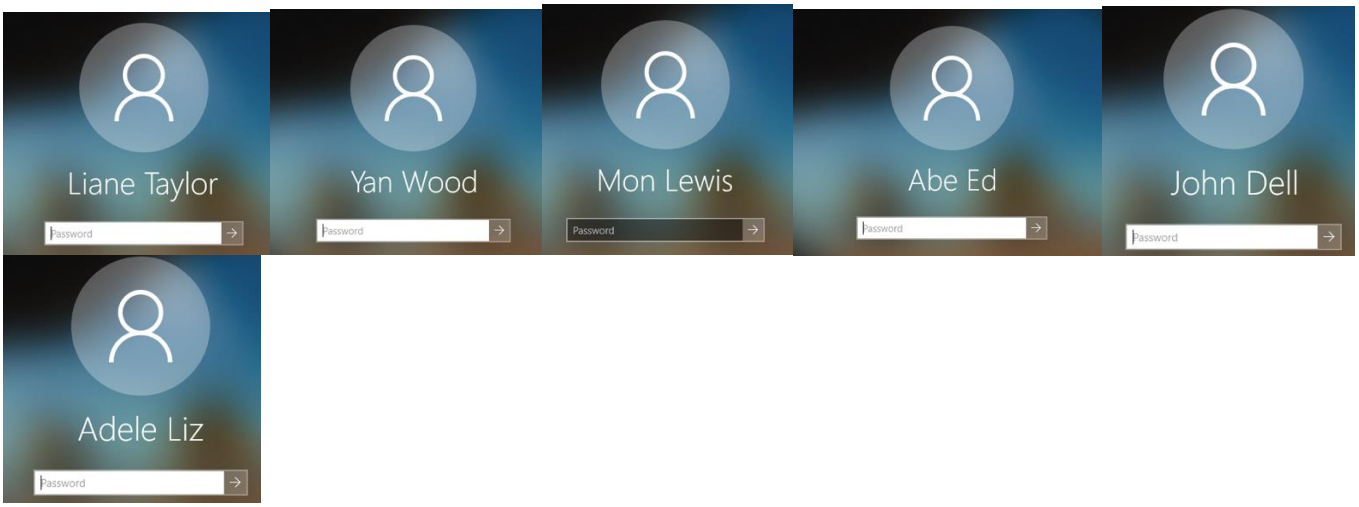

Assessment Task – Portfolio and Observation task

Assessment Task 2: Install and Manage Servers

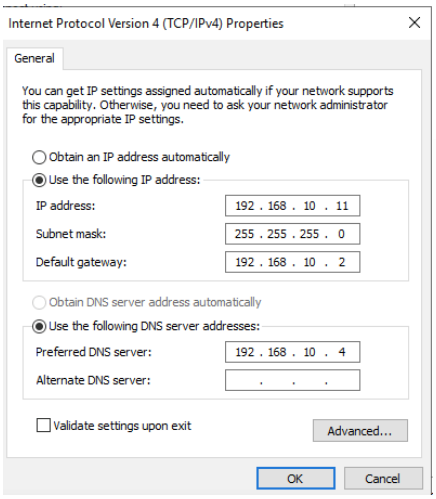

All 6 users are connected to the Domain design.com properly

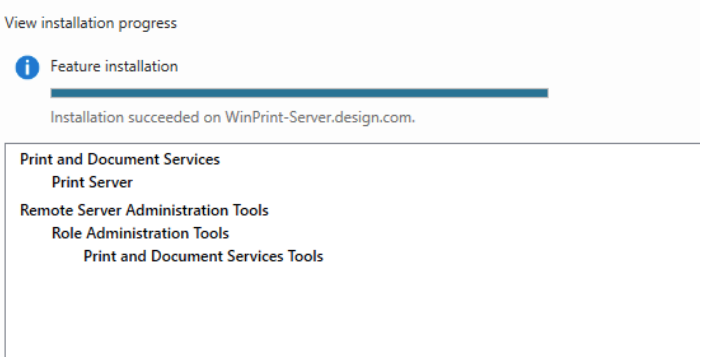

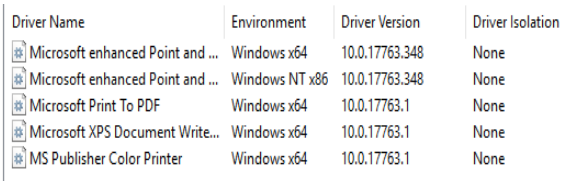

Assessment Task – Portfolio and Observation task

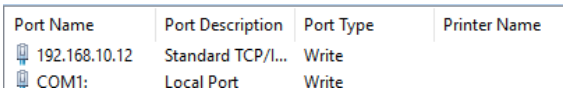

Assessment Task 2: Install and Manage Servers

7.Connect a printer to the server and share it with all users and groups on the network.

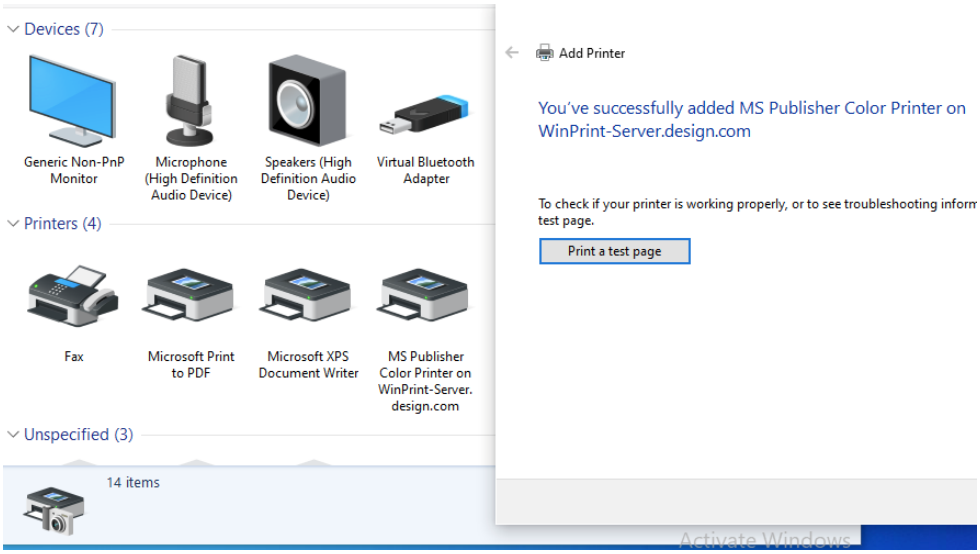

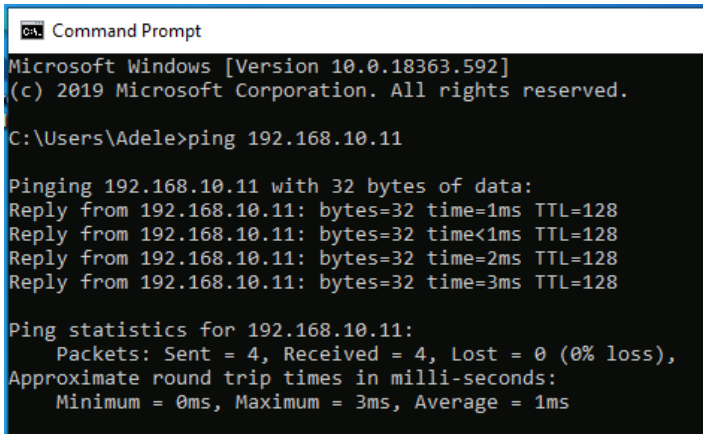

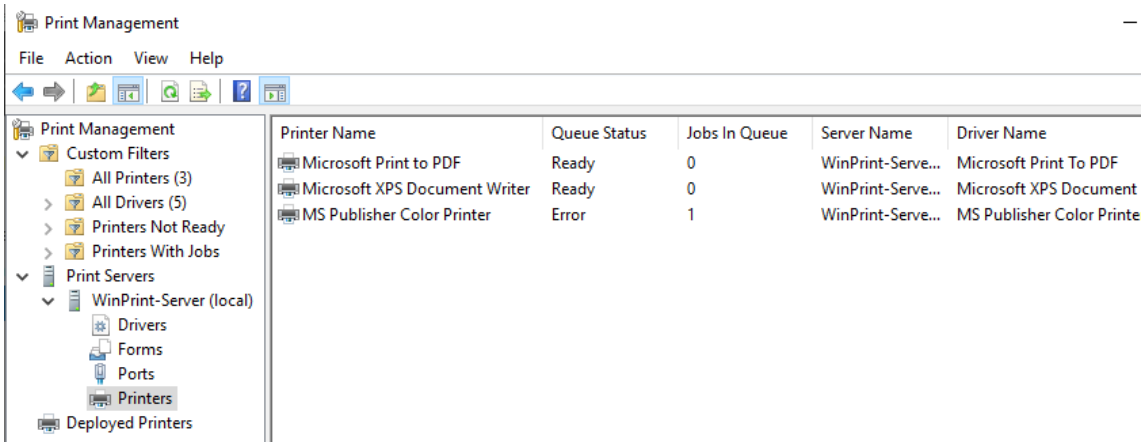

All 6 users are connected to the printer

Assessment Task – Portfolio and Observation task

Assessment Task 2: Install and Manage Servers

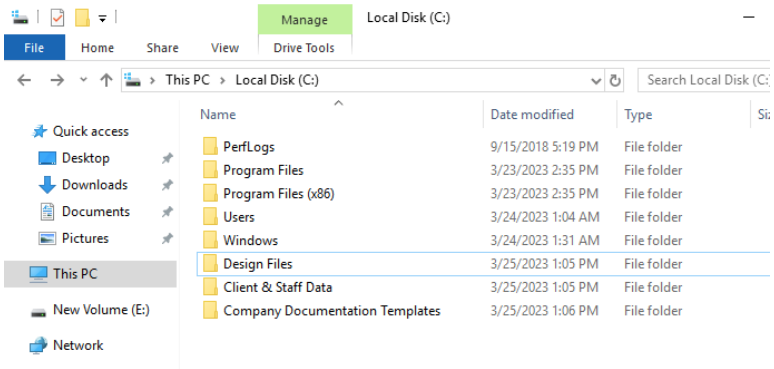

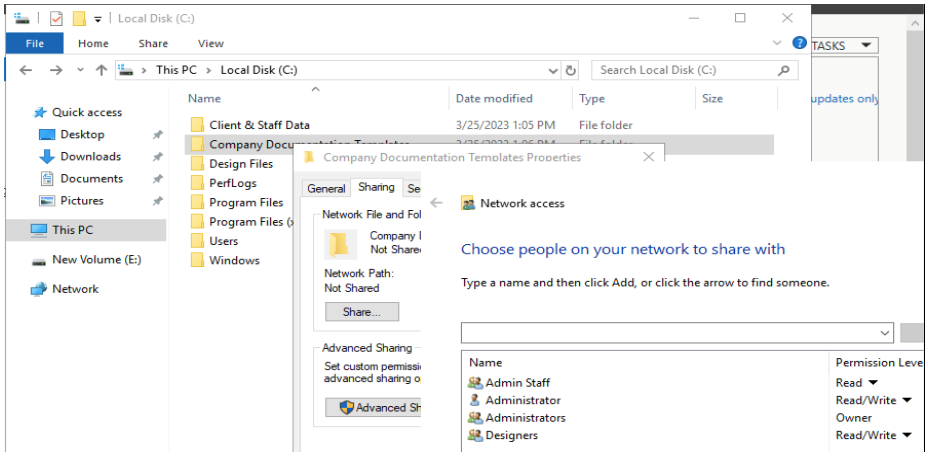

Assessment Task – Portfolio and Observation task

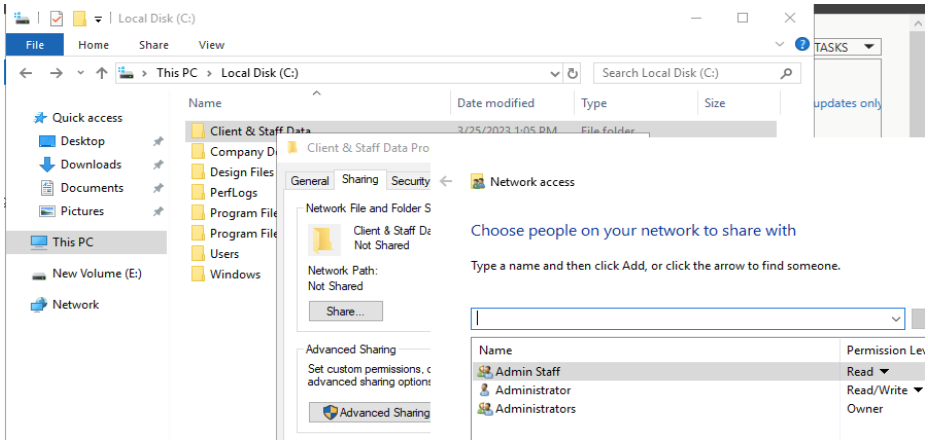

Assessment Task 2: Install and Manage Servers

8.Create three folders on the server with names--“Design Files”, “Client & Staff Data”, and “Company Documentation Templates” with the following security restrictions:

a. Only members of the “Designers “group can access the” Design files folder”
b. Only members of the “Admin Staff” group can access the “Client & Staff Data folder”
c. Both the “Designers” and “Admin Staff” can have access to the “Company Documentation Templates”
d. To these 3 folders all the users must have a mapped folder.
e. Set a quota of 200MB for each user.

Assessment Task 2: Install and Manage Servers

The clients able to see the map as “Z:”

Assessment Task – Portfolio and Observation task

Assessment Task 2: Install and Manage Servers

9.Test and validate any changes or additions to the server environment.

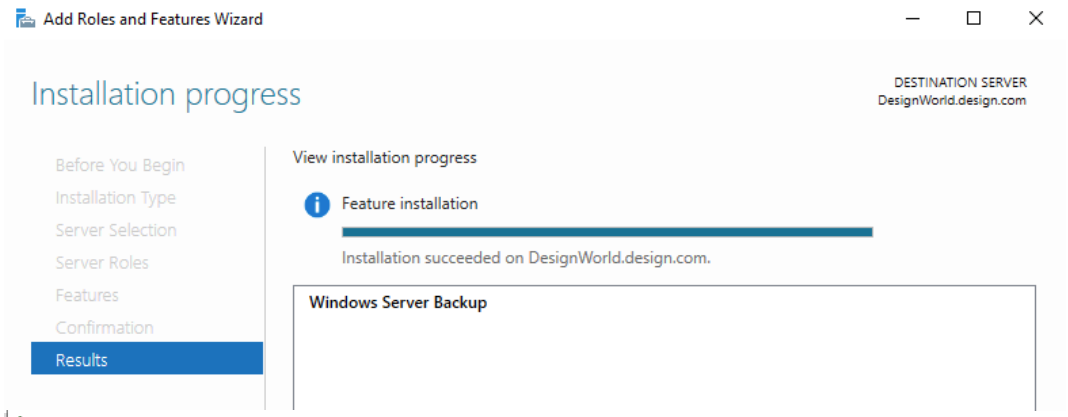

You will find screenshots along the questions.

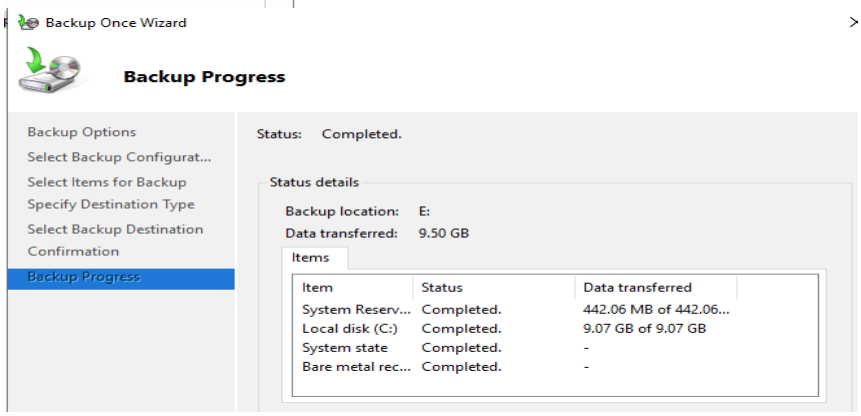

```
C:\Users\Adele>
C:\Users\Adele>ping 192.168.10.4

Pinging 192.168.10.4 with 32 bytes of data:
Reply from 192.168.10.4: bytes=32 time<1ms TTL=128
Reply from 192.168.10.4: bytes=32 time=1ms TTL=128
Reply from 192.168.10.4: bytes=32 time=3ms TTL=128
Reply from 192.168.10.4: bytes=32 time=1ms TTL=128

Ping statistics for 192.168.10.4:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 0ms, Maximum = 3ms, Average = 1ms
```

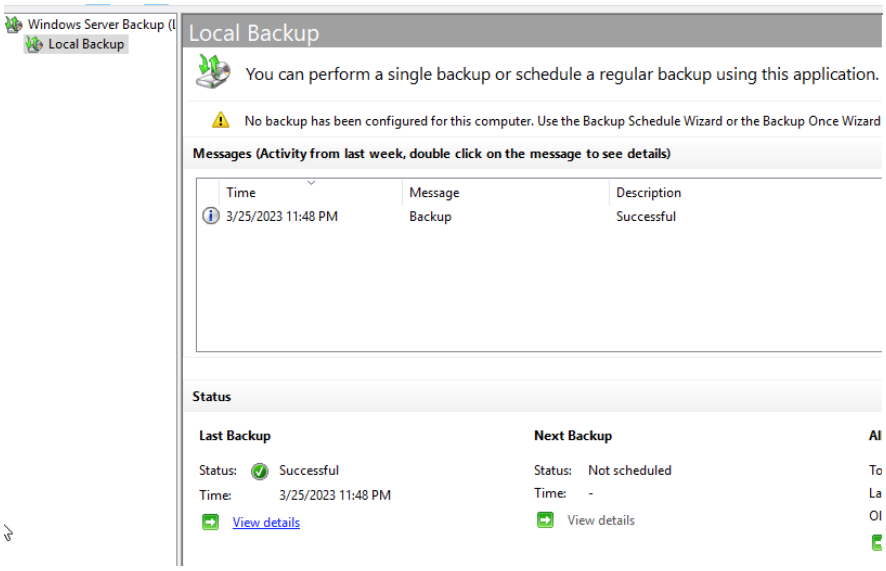

10.Backup and Restore data from server and Desktop Computers to new systems accordingly.

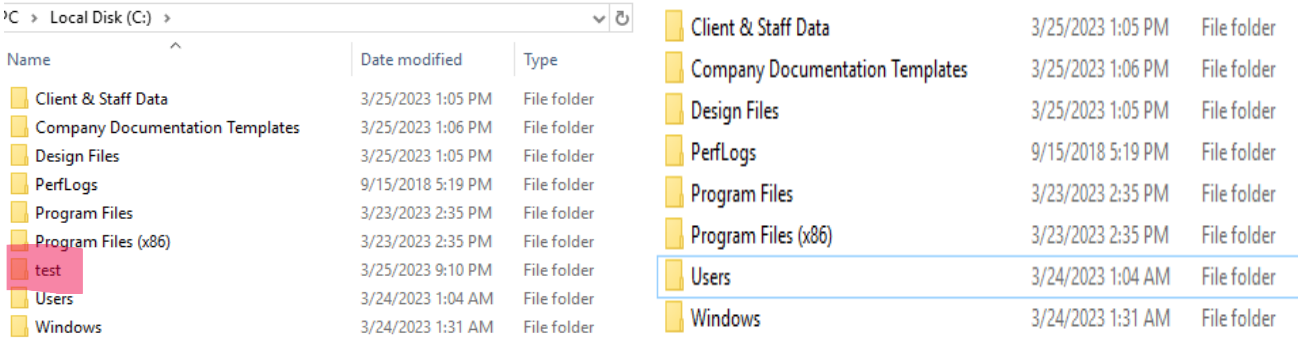

Assessment Task – Portfolio and Observation task

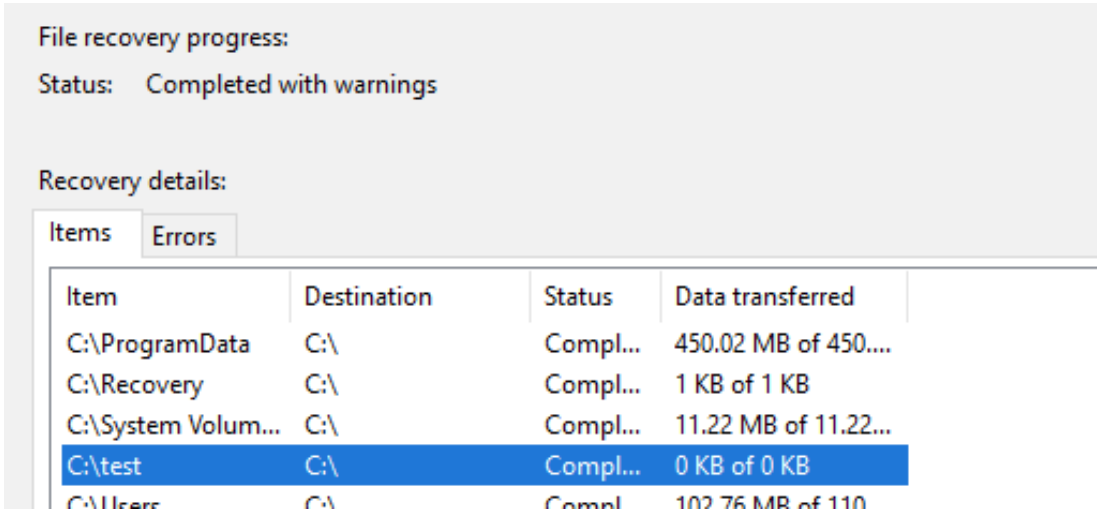

Assessment Task 2: Install and Manage Servers

I am deleting the “test” file the I’m going to recover next step:

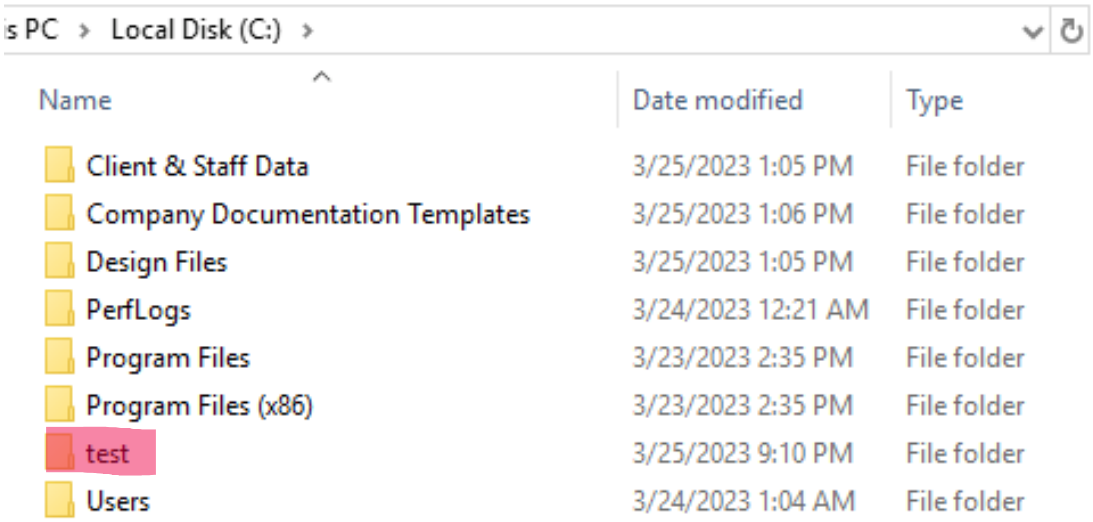

Recovery:

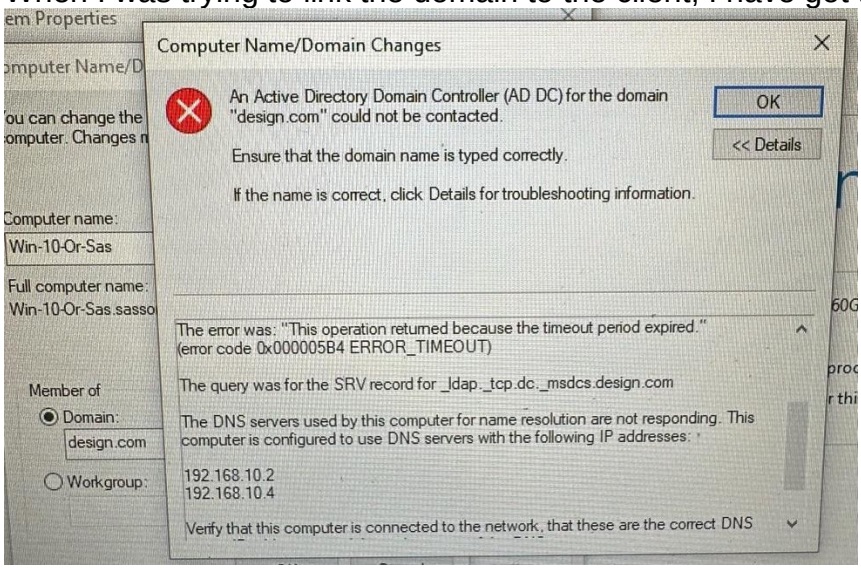

Assessment Task – Portfolio and Observation task

Assessment Task 2: Install and Manage Servers

11.Trouble shoot server and any network failures by carrying out performance testing using utility tools and seek feedback on server performance

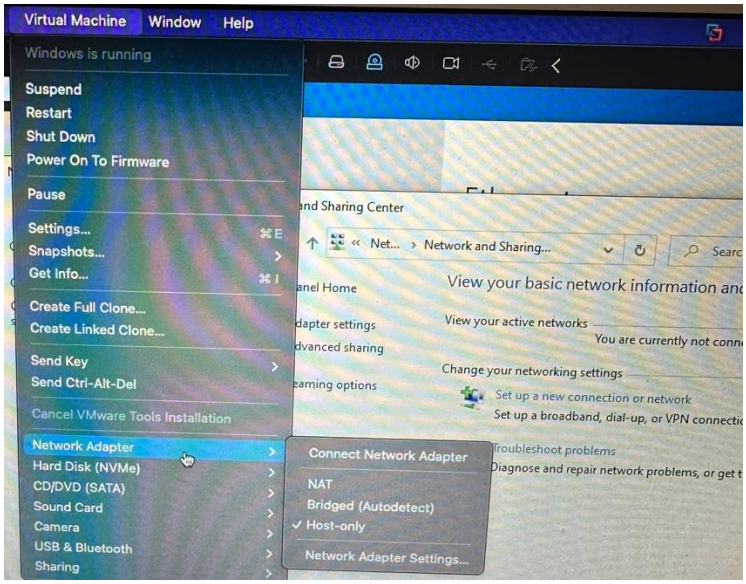

When I was trying to link the domain to the client, I have got this error:

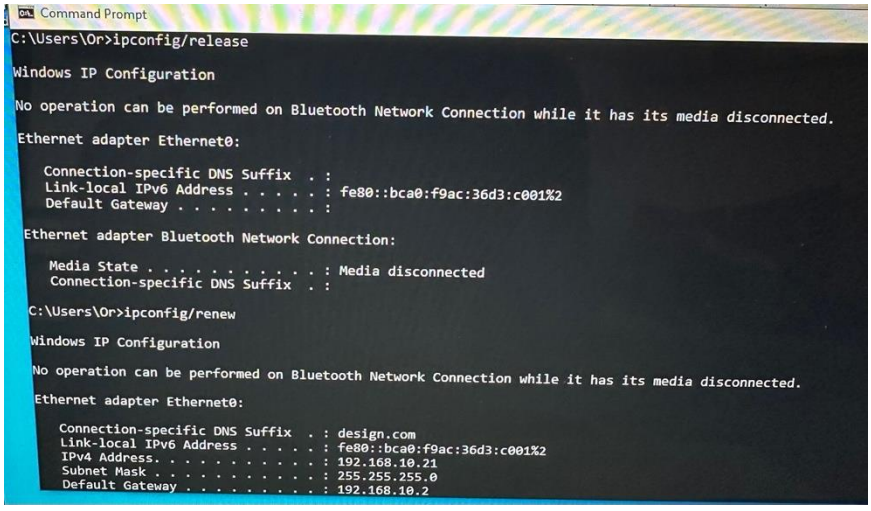

Assessment Task – Portfolio and Observation task

Assessment Task 2: Install and Manage Servers

**Apparently, I found out that my server VM is on NAT setting and my client one on Host-only.
When I changed my client to NAT it worked.**

**When I was trying to activate the dynamic Ip with DHCP, It will give me a different address for the client (5.20), which was not within my DHCP range of 10.20 to 10.100.
For fixing it I had to open CMD and run the command: "release" and then: "renew", and then got my address with the correct range I set up in the DHCP (10.21)**

Client Brief

Design world is a small sized privately-owned design business in the southern suburbs of Melbourne. It is currently employing 10 staff and managing all aspects of design work. The company has recently raised a large volume of capital to invest in ICT infrastructure to meet demand for its services.

Currently the business runs a small peer-to-peer based network that allows a certain level of informal sharing. However, this sharing is uncontrolled and occasionally things accidentally get deleted or overwritten. The business needs some sort of centralised server-based solution and has asked you to set up the environment. The business currently has 5 Desktop computers and 5 VoIP phones. The Director of the company has another Personal Use Laptop which is also used in the network.

Recently, they received a massive project order, to design large 3D video campaigns for a community hub to be delivered within a tight timeframe. They are looking to employ additional designers to help complete the project on time. The new project requires at least new 6 staff members and high-speed computers.

While they upgrade the infrastructure, the Director of the company decided to restructure the network infrastructure as from Fast Ethernet to Gigabit Ethernet LAN. As part of the infrastructure upgrade, they are going to install and manage the Windows server 2019 environment. Moving forward, the director decided to run virtual servers to cut the electricity bills and easy backup and recovery.

You have been tasked to implement the upgrade of infrastructure to client-server-based environment for Design world. You need to make sure the existing data should be backed up and restored on the new system. New Desktop computers should have all the required applications and the Antivirus software is a must.

When you install and configure the new virtual server using VMware workstation, you need to have minimum of two disk partitions to have operating systems on one partition and Data on the second partition, also you must create users in the active directory to test the computers and permissions. All the new desktop computers must be a member of the company design world domain. The Data partition must have minimum 3 folders to have Design File, Design Software, and Documentation Templates. Further to these 3 folders all the users must have a map folder. You can map the folder using bat file.
